SECURITY

Integrations – Offline wireless locks

- Communications via updater
 - Updater writes data on badge
- Badge transports data between updater and locks
- Limited Validity
 - Periodic passing with badge along updater for validity

Integrations – Intelligent offline keys & cylinders

- For locks that need to be opened less often
- Battery is in the key, not in the locks → Key supplies power to cylinder or lock
- Key can be "charged" with app on smartphone to gain access for a limited time
- Key can also be used as a badge

Bluetooth

Integrations – Digital key cabinets

100% Integrations

- All integrated hardware products:
Full management in SynGuard → 1 user interface
No different software installations required
- Combinations of different systems possible
 - Online & offline wireless locks
 - Different brands together
 - Biometrics & "standard" readers
Depending on required security
