SMOOTH AND ENGRAVED COATINGS

Introduction

The Janus doors have always distinguished themselves for elements of elegance, innovation, design, and living comfort, as well as for extraordinary security performance certified by the best European institutes. Customizable according to personal preferences, thanks to the wide range of coatings, finishes, and accessories available, they are constructed with eco-friendly materials and ensure exceptional durability over time.

4

In this catalog, you will find our proposals for aluminum coatings.

Icon explained

SUN COATINGS

Suitable for exterior security doors. These are exterior coatings because they are suitable for every type of exposure to sun, water, humidity, and temperature.

Aluminum panels

Aluminum panels

It is the ideal material for your exterior security door. Lightweight, highly durable, and suitable for any type of weather conditions because it has the ability to resist atmospheric corrosion, even in marine or industrial environments. Although it is normally a good thermal conductor, our aluminum panels have a special foam core that does not alter the transmittance values of the chosen door model. Furthermore, it is a material that not only lasts a long time but is also easily recyclable.

Finally, it is a customizable and workable material, and here you can find many ideas.

Cleaning

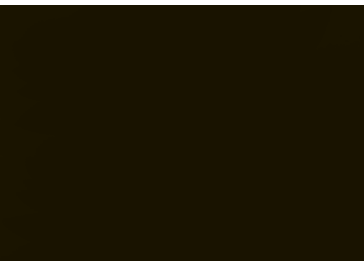

To clean an aluminum panel, remove the dust and wipe it with a damp cloth using water and a neutral solution, then dry.

Remember

If you choose an aluminum panel and an avant-garde kit, remember that the RFID reader does not work, so it is not possible to open the door with tags or cards.

LACQUERED PANELS

With a glossy or matte wrinkled anti-scratch finish.
